

AquiTron

Introducing the AT-ZAP alarm panel

A multi-zone alarm control panel for water, oil, chemical and refrigerant gas leak detection

This is the latest addition to the AquiTron range of leak detection panels

The AT-ZAP is a multi-zone addressable panel with 12 individual sensing zones that can monitor different sensors in order to detect leaks including water, oils, chemicals as well as monitor for refrigerant gas (or a combination of any of these). A total of 1,200 metres or 120 sensing probes can be simultaneously monitored.

- The AquiTron Zone Alarm Panel is designed with multi-zone flexibility in mind
- It offers an extensive level of user defined functionality, on a zone-by-zone basis for all 12 zones
- Touch screen graphical user interface, giving access to a range of live, real-time and historic sensor, monitoring and alarm event data
- Instant audible and visual (alarms shown on screen display) notification when a leak, spill or flood is detected
- Can be integrated with BMS systems, connected to external alarms or beacon sounders (including remote muting)
- Works with all the AquiTron and TraceTek sensing cables and probes for water, fuels, oils, chemicals and refrigerant gas sensors
- Both commercial and residential building applications to provide protection against leaks
- Water shut-off solenoid valves can simply be connected and assigned to specific rooms or zones to isolate a leak quickly and minimise disruption. (Can directly control Aquilar valves with no mains switching or extra PSUs required)
- Battery backup can be simply added to the panel to provide instant battery power in case of power disruption
- In the event of multiple or simultaneous leaks, all zones operate individually and can report all events accurately.
- All 12 zones can be individually enabled/disabled to suit the number of rooms/areas for the application
- Integrated 12/24Vdc power is provided for sounder beacons, remote alarm units, refrigerant gas sensors and optical oil/water sensors

aquilar
leak detection solutions

Customers can enjoy the peace of mind that all products are backed up by a 5-year warranty

Applications

- Data centres, server and comms rooms
- Museums and galleries
- Office, schools and universities
- Service corridors with low and high level water pipes
- HVAC mechanical plant rooms
- Electrical HV and LV switch rooms
- Tea and coffee points, water coolers and break-out areas
- Plant rooms, tank rooms and boiler houses
- Archive rooms
- Diesel generators and day tank rooms
